## Introduction

Options

Typography

Environments

Colors

**lplus** is a simplistic, feature-complete Beamer theme.

Enable the theme by loading

```
\documentclass{beamer}  
\usetheme{lplus}
```

## Package Options

Besides the standard beamer package options (such as `aspect`), **lplus** introduces several custom package options:

- `darkmode` uses an inverted color scheme
- `nosectionpages` and `nosubsectionpages` hides section or only subsection pages. If section pages are hidden, no subsections are shown regardless of whether `nosubsectionpages` is set.
- `truewhite` reverts to pure white and black; the theme uses a slight off-white and gray by default, which can cause problems when, e.g., printing
- `colorblocks` renders block environments with background colors. By default, only the outline of a block is drawn.

## Title Page Macros

The usual title page macros such as author, date, title and subtitle are supported. Additional options include:

- Short title for use in the header (analogous for subtitle)  
`\title[short title]{long title}`
- Institution  
`\institute{institution}`
- Additional graphics on the title page:  
`\titlegraphic{filename}`

# Typography

**lplus** uses the marvellous inter font family, paired with inconsolata for monospaced text.

You can `\emph{emphasize}` text, `\alert{accent}` parts or show `\textbf{bold}` results.

becomes

You can *emphasize* text, **accent** parts or show **bold** results.<sup>1</sup>

---

<sup>1</sup> Footnotes work as well. Even in monospace.

## Blocks

Five different block environments are pre-defined. The `colorblocks` option can be invoked to render solid block background colors.

Default

Block content.

Alert

Block content.

# Colors

**lplus** defines a color-blind friendly theme of 5 colors in 6 perceptually uniform variants each. Colors are automatically inverted in dark mode. The white and black used by the theme are defined as Black and White.

## Color Gradients

The six variants in each color are equally spaced in brightness. They can be linearly interpolated to approximate perceptually uniform gradients.

The use of colors beyond the 1 and 6 variants is discouraged as lighter and darker colors are too hard to tell apart.
